Mimecast Archive Sync & Recover

Automated Data Recovery and Advanced Email Management Tools

Simplified Email Data Resilience and Management

Email continues to be the preferred business communication tool and defacto data repository. It holds vast amounts of critical and sensitive information. Protecting this data against loss or corruption and managing spiraling inboxes is imperative. Without the right tools this can be a challenge.

Mimecast Sync & Recover for Exchange and Office 365 offers three key capabilities that expand on the built-in tools provided by Mimecast Archiving alone. These are:

- Sync & Recover
- Granular Retention Management
- Mailbox Storage (Stubbing) Management

Sync & Recover

Sync & Recover delivers rapid and granular recovery of mailboxes, calendar items and contacts lost through inadvertent or malicious deletion or corruption. Easy to deploy and a fully integrated extension to the Mimecast Archive, it eradicates the need for standalone email backup and recovery tools and is 100% cloud-based.

Combined with Mimecast Targeted Threat Protection and Continuity services as part of a layered defense against malware attacks like ransomware, organizations benefit from industry-leading prevention of email-borne cyber exploits, simplified recovery of email data in case of breach, and uninterrupted email access. This robust cyber resilience capability is delivered from a single, unified platform and administration console.

To aid recovery and simplify employee archive search and navigation, individual and shared Outlook mailbox folders can be replicated to the Mimecast Archive. Employees get vital access to familiar folders and shared mailbox content from Outlook, mobile devices, Mac and web apps (Mimecast Personal Portal), even if primary mail systems are unavailable.

KEY FEATURES:

- Automated sync up to 6 times per day, with tracking of all changes
- Rapid recovery of mailboxes, personal folders, calendar items, and contact lists
- Consistent folder structure within the Mimecast archive across Outlook, mobile device and Mimecast Personal Portal interfaces
- Automated mailbox size management
- Ability to configure retention policies based on email metadata and Active Directory group attributes
- Cloud, on-premises and hybrid Exchange email support

BENEFITS AT A GLANCE:

- Unified management of compliance archiving and data resiliency
- Streamlined configuration of recovery and search
- Multilayered defense against Exchange data loss or damage due to ransomware and other malware
- Cloud-to-cloud backup; no hardware or software to manage
- Access to replicated folders and emails across all Mimecast apps

Granular Retention Management

Granular Retention Management allows administrators to simply manage policy-based retention of email content and metadata. Retention policies can be defined at an Exchange folder or mailbox level.

Mailbox and Folder Sync & Recover

Mailbox Storage Management

Granular Retention Management

Administrators can even automate complex, custom rules for user archive retention, administrative retention, and expiry. They can apply policies based on email metadata, Active Directory group membership and attributes. Multiple retention period scenarios, including split retention across the user base, can also be applied.

Mailbox Storage Management

Mailbox Storage Management enables Administrators to control the size of Exchange and Office 365 mailboxes. If data is in the Mimecast Archive it can be safely removed from the users mailbox while maintaining seamless access via a link to the archive (leaving the message in its original location) or by using the folder replication feature to view the message from Outlook or any Mimecast app.

Advanced Data Resilience, Simplified

- **Simplified Administration**. Manage compliance archiving and data resiliency from a single Administration Console, without the need for seperate backup and recovery solutions.
- **Streamlined Recovery.** Automate recovery of individual items, entire mailboxes or folders.
- **Comprehensive Ransomware Protection**. In conjunction with Mimecast Targeted Threat Protection and Continuity, Sync & Recovery delivers a ransomware defense that addresses the full attack cycle.
- **Cloud-based Efficiency**. Cloud-to-cloud backup technology with no hardware or software to manage.
- **Flexible Deployment.** Support for complex, global messaging environments and hybrid cloud

Mimecast (NASDAQ: MIME) makes business email and data safer for thousands of customers with millions of employees worldwide. Founded in 2003, the company's next-generation cloud-based security, archiving and continuity services protect email and deliver comprehensive email risk management
