

The image shows a standard WordPress login form with a large, semi-transparent shield overlay. The shield is dark blue on the left and light blue on the right, with a white keyhole icon in the center. The text 'WP 2FA' is written in white on a dark blue background at the bottom of the shield. The login form includes a 'Username' field, a 'Password' field, a 'Remember me' checkbox, and a 'Log In' button.

Two-factor authentication

Description

A FREE & EASY TO USE TWO-FACTOR AUTHENTICATION PLUGIN FOR WORDPRESS

Add an extra layer of security to your WordPress website login page and its users. Enable two-factor authentication (2FA), the best protection against users using weak passwords, and automated password guessing and brute force attacks.

Use the WP 2FA plugin to enable two-factor authentication for your WordPress administrator user, and to enforce your website users, or some of them to use 2FA.

MAINTAINED & SUPPORTED BY WP WHITE SECURITY

WP White Security builds high-quality niche WordPress security & admin plugins such as Password Policy Manager, a plugin with which you can ensure all your users use strong passwords.

Browse our list of WordPress plugins that can help you better manage and improve the security of your WordPress websites and users.

WP 2FA KEY PLUGIN FEATURES & CAPABILITIES

- Free Two-factor authentication (2FA) for all users
- Supports TOTP (code from 2FA apps like Google Authenticator and Authy) and OTP (email based codes)
- Supports 2FA backup codes
- Very easy to use and wizard driven
- Use policies to enforce 2FA with a grace period or require your users to instantly setup 2FA upon login
- Protection against automated password guessing and dictionary attacks

WP 2FA key benefits & features

Improve user login security

Statistics show that traditional logins are too weak, due to the sharp increase & success of automated password attacks. By adding 2FA you add an additional layer of security to your login pages.

Select from multiple 2FA methods

The plugin supports several different 2FA protocols, giving your website users the flexibility to select the method that fits their requirements without hindering their productivity.

Supports multiple 2FA apps

WP 2FA supports a wide variety of 2FA apps. It supports Google Authenticator, Authy, FreeOTP, Duo Security and several other popular 2FA apps right out of the box.

Make 2FA a compulsory requirement

With WP 2FA plugin you can enable policies to make two-factor authentication for all your users, store customers, & website members compulsory, so no account is unprotected.

Allow users a grace period

The plugin allows you to give your users a grace period when you require them and enforce 2FA, so they can do it at their convenience without requiring technical assistance.

Require users to instantly setup 2FA

If you do not want to allow users a grace period, you can always require them to instantly setup and use 2FA, otherwise they won't be able to login to your website.

Block user logins without 2FA

When users do not configure 2FA within the configured grace period, they are not allowed to login until they configure 2FA, so not to jeopardize the security of your website.

Multisite networks compatible

Use the WP 2FA plugin to enable two-factor authentication on your multisite network. You can also use policies to make 2FA compulsory, network-wide for all or a selection of users and roles.

Front-end 2FA setup & configuration

Users do not need to access the WordPress dashboard. If you use custom user profile pages on your eCommerce shop or membership site, users can still easily setup 2FA.

Custom login page support

The WP 2FA plugin has out-of-the-box support for custom login pages and post login redirects. So if you use any, you can still add 2FA without the need to customize your setup.

Fully configurable email templates

All the email templates the plugin uses are fully editable. On top of that, every individual email can be disabled (and re-enabled), and all other email settings are fully configurable.

Boost productivity & flexibility

With a more secure WordPress authentication mechanism your team can work and access the WordPress dashboard safely and securely from anywhere and any device.

Reduce helpdesk & security costs

Around 40% of helpdesk calls in the industry are for password resets. With easy to follow wizards and backup codes, your website users no longer need to call helpdesk.

Protect against fraud

Identify and cardholder thefts are on the rise year on year. Help your e-commerce store customers or membership site members keep their accounts and personal data secure.

Protect against password attacks

With two-factor authentication on your website malicious attackers cannot hijack your website's user accounts, even if they guess their username and passwords.
